SYLLOGISM

A *syllogism* is a form of deductive reasoning consisting of **two premises** and a **conclusion**. If the premises are true and the structure is valid, the conclusion must also be true.

Basic Structure

- **Major premise** — a general statement
- **Minor premise** — a specific statement
- **Conclusion** — what logically follows

SYLLOGISM

- Venn diagrams are quite important when it comes to solving syllogism questions.
- One must not create any data of his own. It is important to follow only that data which is mentioned there in the question.
- Words like few, at least, some etc are the basics to solve such type of questions. Pay attention to these words.
- The only data to be followed while solving a syllogism question is the data mentioned in the question itself.
